Faculty of Engineering

UNIVERSITY OF LEEDS

Fire Dynamics and Modelling

Monday 24 – Friday 28 October 2016

15% discount for IFE Members
Background to the course
Each year, fires and explosions claim a greater toll than earthquakes and floods and all other natural disasters combined. Some single incidents cost millions of pounds, such as the Windsor Castle fire. Explosion-initiated fires can cause severe devastation as in the Piper Alpha disaster in the North Sea where 167 lives were lost and the financial loss exceeded a billion pounds. The Deep Water Horizon explosion and fire resulted in the loss of 11 lives and the cost to BP is set to rise above £27bn. Loss of life in fires is commonplace and can be in large numbers, such as the 2013 Kiss nightclub fire in Santa Maria, Rio Grande do Sul, Brazil, killing at least 242 people echoing the 2003 Station club fire in Rhode Island where 100 people were killed.

Understanding the mechanisms and dynamics of fire development from a fundamental scientific level enables engineers to design safer systems, buildings and processes that protect life and property more effectively whilst allowing greater freedom in design.

Who should attend
Any function that needs to gain a comprehensive, scientifically based analysis and engineering quantification tools, of fire development and consequence assessment in industrial and residential scenarios. This could include those involved in the design and operation of buildings and chemical plant (architects, civil engineers, chemical engineers), and in the design of protection systems (passive and active system developers, manufacturers, installers), those responsible for building and plant safety on a day to day basis, regulators and advisors (HSE, Fire Service, Home Office, Local Authorities, Building Control Officers, Consultants / insurers) and fire-fighting professionals. Additionally, young researchers may find this course very useful.

What will you get out of this course?
On completion of this course, participants should be able to apply general combustion and engineering principles to fires, should know the parameters that influence flame spread and steady burning and should be able to quantify the burning rate in compartment fires, predict the rate of development of the fire, the onset of flashover, and appreciate the application of these concepts to fire protection design. They should also understand the factors influencing smoke toxicity and movement.

The participants will also be made aware of the predictive tools that are available and should become familiar with the application and use of such tools, through “hands-on” practice.

Course format
The course will follow a structured approach starting from the general fundamental principles of combustion flammability and heat transfer and leading the participant through to the more specific study of fire spread and fire development in compartments. Open fires such as pool and jet fires will also be covered. The principles of fire protection practice and technology will be discussed within the context of understanding the fire development mechanism and the response of structures to fire. The participant learning experience will be enhanced through worked examples and brief problems that the participants will be asked to attempt on their own or in groups (so please bring a calculator with you). On the last day of the course there will be the opportunity for some hands-on experience with predictive PC packages.

Accreditation
The Fire Dynamics and Modelling CPD course, Leeds, has been approved for 33.5 CPD hours in total by the Institution of Fire Engineers (IFE).

The Energy Institute has approved the University of Leeds – Faculty of Engineering as an Approved Training Provider.

MSc Option
This course also forms part of an MSc Masters programme (full-time or part-time) in Fire and Explosion Engineering. Modules of this MSc may also be taken individually or as part of a coherent course to meet personal needs for Continuing Professional Development (CPD). For more information on the MSc please visit the website at http://www.engineering.leeds.ac.uk/short-courses

What our previous delegates say:
“An invaluable grounding in all fundamentals of fire modelling”
“Very fast paced and compact course that contains all the information you could need to understand the basics of fire dynamics and modelling”
“An excellent range of topics and expert guest speakers. A well recommended course”

Other fire engineering courses include:
- Fire and Explosion Investigation
  26 – 30 September 2016
- Fire Safety Design
  28 November – 2 December 2016
- Gas, vapour and dust
  Explosion Hazards – protection, prediction and mitigation
  20 – 24 March 2017
Adminstration Details

Venue
The venue for the course will be Weetwood Hall Conference Centre and Hotel which offers first-class hotel facilities, a business centre and ample parking facilities.

Weetwood Hall Hotel is ideally situated 15 minutes north of the centre of Leeds in wooded grounds at the junction of the Otley Road and the outer ring road. It is just 15 minutes from Leeds Bradford International Airport and a short distance from the A1, M1, M606, M621 and M62 motorways.

Further details can be found at www.weetwood.co.uk

Course fees
The following course fees include the cost of tuition, course materials, lunches and light refreshments for the days of attendance:

- **Full five days**: £1595
- **Any one day**: £410
- **IFE members**
  - IFE members fee £1355.75
  - IFE members one day fee £348.50

Accommodation
Bed and breakfast accommodation is available at the course venue, Weetwood Hall Conference Centre and Hotel.

We have negotiated the following special rates per night:

- **Friday – Sunday evening, bed and breakfast**: £78
- **Monday – Thursday evening, bed and breakfast**: £82

To take advantage of the special rates we have negotiated with the hotel for our course delegates, please book using the instructions below:

1. Log onto: www.engineering.leeds.ac.uk/short-courses/
2. Select ‘Course title”
3. Click on the ‘Accommodation Booking’ link in the left hand column
4. Complete the following fields: Arrival Date, Departure Date, Rooms, Adults, Children.
5. Click the ‘Check Availability’ button (N.B. you will not need to click on ‘Click Here for Special Rates’ or enter a promotional code as this is already completed for you).
6. Proceed with your booking as instructed by the booking system.

A list of alternative hotels is available on request.

Delegates are responsible for their own evening meals except on Monday 24 October when the course dinner is included.

If you are unable to complete your accommodation using the online booking system please contact Weetwood Hall Hotel directly at the contact details given on their web page at www.weetwood.co.uk

Please note that bookings via the “Accommodation Booking” link must be made two weeks before the course commences at the latest to qualify for the special rates and to guarantee room availability. Any accommodation requests after this date should be made direct with the hotel and will be subject to availability and rates.

How to book
Booking for this course should be completed through our secure Online Store. To complete your booking please follow the instructions below:

1. Log on to our Online Store at: https://store.leeds.ac.uk/
2. Select Conferences and Events in the left-hand navigation bar.
3. Select CPD Faculty of Engineering
4. Select the course or event for which you wish to register and click on “Book”.
5. If you are a new user, please follow the instructions to register. If you already have an account log in as instructed.
6. Complete the application process as directed by the booking system.

You will receive an automatic confirmation email within 24 hours of your booking.

Course dinner
The course dinner will be held at a Leeds city centre restaurant and is included in the course fee. This will take place on Monday evening and transport from and to Weetwood Hall Hotel is provided. The dress code is smart casual. If you would like to attend please indicate when booking.

Special requirements
Potential delegates who have any special requirements should contact the course coordinator as soon as possible.

For online booking queries and for all other enquiries please contact:

CPD, Conference & Events Coordinator

Terms and conditions for booking
Payment in full should accompany your booking. The course fee is exempt from VAT. Fees must be paid in full no later than 15 working days before the course commences. Failure to pay may result in attendance being refused.

Registrations are accepted on the understanding that the printed programme is given in good faith but may have to be re-scheduled or the speakers changed for reasons outside our control. The University of Leeds reserves the right to cancel or postpone the course, in which case fees will be refunded in full. In the event of cancellation, the University will not be held liable for delegates travel or accommodation expenses.

Delegates will receive a full refund for cancellations made within 7 days of online booking, except where the booking has been made for an event commencing within the next 7 days. Where a delegate wishes to cancel a registration after this 7 day period, written cancellations received up to 15 working days before the course will be subject to an administrative charge of 50% of the total remittance. After this date the full fee is chargeable and no refunds will be made, this also applies for non-attendance but copies of the course documents will be sent. Substitutions may be made at any time.

If you are unable to complete your registration using the online booking system please contact the CPD, Conference & Events Unit to discuss alternative arrangements.
